## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1 and 3-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Okazaki et al. (US 6,889,043).

Referring to Claim 1, Okazaki teaches A microphone device, comprising:

a microphone 26 (fig. 1) having a microphone transducer (see col. 5, lines 39-46); and

a recording unit for recording signals generated by the microphone transducer of the microphone (see col. 7, lines 30-44);

Art Unit: 2682

said recording unit and said microphone being connected to one another via a detachable plug connection (see 124 and 21 in fig. 1) and the signals generated by the microphone transducer being transmitted to the recording unit via the plug connection (see col. 7, lines 45-49 and line 63 to col. 8, line 3).

Referring to Claim 3, Okazaki also teaches means for data reduction formed in the recording unit and wherein the audio signals are recorded with a data-reduced format (see col. 6, line 64 to col. 7, line 11).

Referring to Claim 4, Okazaki also teaches an interface formed in the recording unit for wireless transmission of recorded audio signals (see col. 11, lines 4-13).

Referring to Claim 5, Okazaki also teaches a headphone socket formed in the recording unit, by which the audio signal recorded by the microphone is audible (see col. 7, lines 45-49).

Referring to Claim 6, Okazaki also teaches that the recording unit can be connected to a mobile telephone and has appropriate connection devices for this purpose and a mobile telephone/headset can be connected to the recording unit and/or the mobile telephone (see col. 5, lines 21-38).

Referring to Claim 7, Okazaki also teaches that audio signals recorded by the recording unit are transmitted via the mobile telephone at a signal rate which is lower or higher than the recording data rate and wherein transmission to the mobile telephone can preferably already be started, while audio signals are picked up by the microphone and are recorded and stored by the recording unit (see col. 6, line 64 to col. 7, line 11).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Okazaki in view of Steinmaier (US 4,270,151).

Referring to Claim 2, Okazaki does not teach an XLR plug connection between the recording unit and the microphone. Steinmaier teaches an XLR plug connection between the recording unit and the microphone (see col. 2, lines 44-48). Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the teachings of Steinmaier to said device of Okazaki in order to provide better quality signal between the microphone and recording unit.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eugene Yun whose telephone number is (571) 272-7860. The examiner can normally be reached on 9:00am-6:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew D. Anderson can be reached on (571)272-4177. The fax phone
